

Kiryl Viarenich

Senior Frontend Engineer (React)

📍 Poland 📞 +48 516 522 127 ✉ kiryl.viarenich@protonmail.com 🔗 linkedin.com/in/kiryl-viarenich 🐙 github.com/sabbaken

Summary

Senior frontend engineer with 6 years of experience building complex, data-rich applications with React and TypeScript. Strong in frontend architecture, design systems, performance, real-time interfaces, accessibility and testing. Comfortable working in Node.js and NestJS when a user-facing feature needs backend changes.

Technical Skills

Frontend	React, TypeScript, JavaScript, Next.js, Vite, Redux Toolkit, TanStack Query, MUI, Tailwind CSS, SCSS, Mapbox, Three.js, PixiJS, WebSockets, SSE
Quality	Design systems, accessibility, Jest, Vitest, React Testing Library, Playwright
Additional backend	Node.js, NestJS, REST APIs, MongoDB, PostgreSQL, JWT, Auth0
Tools	Git, Webpack, Turborepo, Docker, GitHub Actions, Sentry, Vercel, CI/CD

Experience

Feb 2026 – Present **Full-Stack Developer (frontend-focused)**, *Zensum (Stockholm, Sweden, remote)*

Zensum is a digital loan and mortgage broker operating in Sweden and Norway. Work focuses on the React and TypeScript CRM used by 80+ loan agents.

- **Internal CRM platform**
 - Redesigned the core case management experience for loan agents in Sweden and Norway, replacing parts of the legacy portal with a unified **React** case page.
 - Built a reusable design system and page layout, then migrated 30+ CRM screens to it, standardizing the user experience and improving keyboard and screen-reader support.
- **Engineering & reliability**
 - Led the migration from **Create React App** to **Vite** and upgraded **MUI**, **React Router** and other core dependencies, cutting CI frontend build time by approximately 40%.
- **Product platform & communication**
 - Rebuilt agent-to-customer messaging as a chat-style interface with email rendering, thread previews and offer-aware messages.
 - Resolved **SSE** reliability issues that left offers, invites and bank actions stale in the UI, reducing recurring support incidents and restoring consistent live updates.
 - Built an AI-powered case overview with the **Vercel AI SDK**, server-side validation and localized summaries.
 - Improved production debugging by linking **Sentry** errors and request IDs between the UI and API.

Aug 2021 – Feb 2026 **Full-Stack Developer (frontend-focused)**, *Elinext (Warsaw, Poland, remote)*

- Designed and led a recurring three-month internal React training program for backend and Angular developers, mentoring 7 employees in small cohorts through workshops, hands-on assignments, and code reviews.
- **Floor Plan Editor**

Browser-based collaborative floor plan editor for a startup product.

 - Owned the collaborative editor architecture and chose **React**, **Redux Toolkit**, **PixiJS** and **MongoDB**.
 - Designed and implemented delta-based real-time synchronization, sending only document changes instead of entire floor plans.
 - Defined a shared document and state model so editor tools handled local and remote changes through the same pipeline.

- **Broadcom Unified Infrastructure Management**
 - Designed the state architecture for a complex **React/TypeScript** application, introducing **Redux** with clear state boundaries and predictable data flows.
 - Established the frontend testing approach and increased code coverage by 30%, making refactoring safer and reducing production regressions.
- **Outlier**

French startup building drone-based software for solar plant inspection and monitoring.

 - Integrated **Mapbox** to visualize infrastructure data across multiple zoom levels, from global power plants down to individual solar panels.
 - Used **Three.js** to display 3D models of the sites reconstructed from drone photos.
 - Built interactive map-based interfaces for real-time solar panel inspection and anomaly detection.
- **WylerPlot**

Desktop application for a Swiss manufacturer of precision measurement equipment, used to visualize live sensor data.

 - Implemented reliable real-time data handling with **WebSockets** for sensor connections.
 - Profiled and fixed performance bottlenecks in a **React/Electron** desktop app, making live data views smoother.

Aug 2020 – **Frontend Developer**, *Taqtile (Minsk, Belarus)*
 Jul 2021

- **eLang**

EdTech platform for language learning and teaching through videos, interactive subtitles and exercises.

 - Built a cross-browser language-learning extension with **React** and **Redux**.
 - Developed and maintained sites with **Next.js** and **Tailwind CSS**, applying SEO basics to improve reach and engagement.
 - Migrated the codebase from JavaScript to **TypeScript** to improve maintainability and safety.

Selected Open-Source Project

2026 – **Creator & Maintainer**, *Paperless Starfruit*
 Present

Self-hosted, bring-your-own-keys AI companion for paperless-ngx: better OCR plus automatic titles, tags, correspondents and dates, configured entirely from a web UI.

- Built the full system solo as a **Turborepo**: a **NestJS** API, cron poller, worker and SQLite-backed job queue, plus a **React + Vite** admin app using **TanStack Query** and shared **Zod** contracts.
- Implemented a multi-provider AI gateway for Anthropic, OpenAI, Google, Mistral and local endpoints, with structured output, a review queue and credentials encrypted at rest.
- Shipped a single **Docker** image to GHCR on every release through **GitHub Actions**, with docs and installation guides.
- Reached 50+ stars on GitHub.
